

A Guide to Hybrid Teaching

Hybrid teaching represents a multi-modal delivery solution, in which students are provided with the flexibility to decide on their preferred mode of participation. Students will be able to choose their own unique hybrid experience with no learning deficit that meets their particular needs.

PRINCIPLES

Learner Choice

Provide meaningful alternative participation modes from which to choose

Equivalency

Provide learning activities in all participation modes that lead to equivalent learning outcomes

Reusability

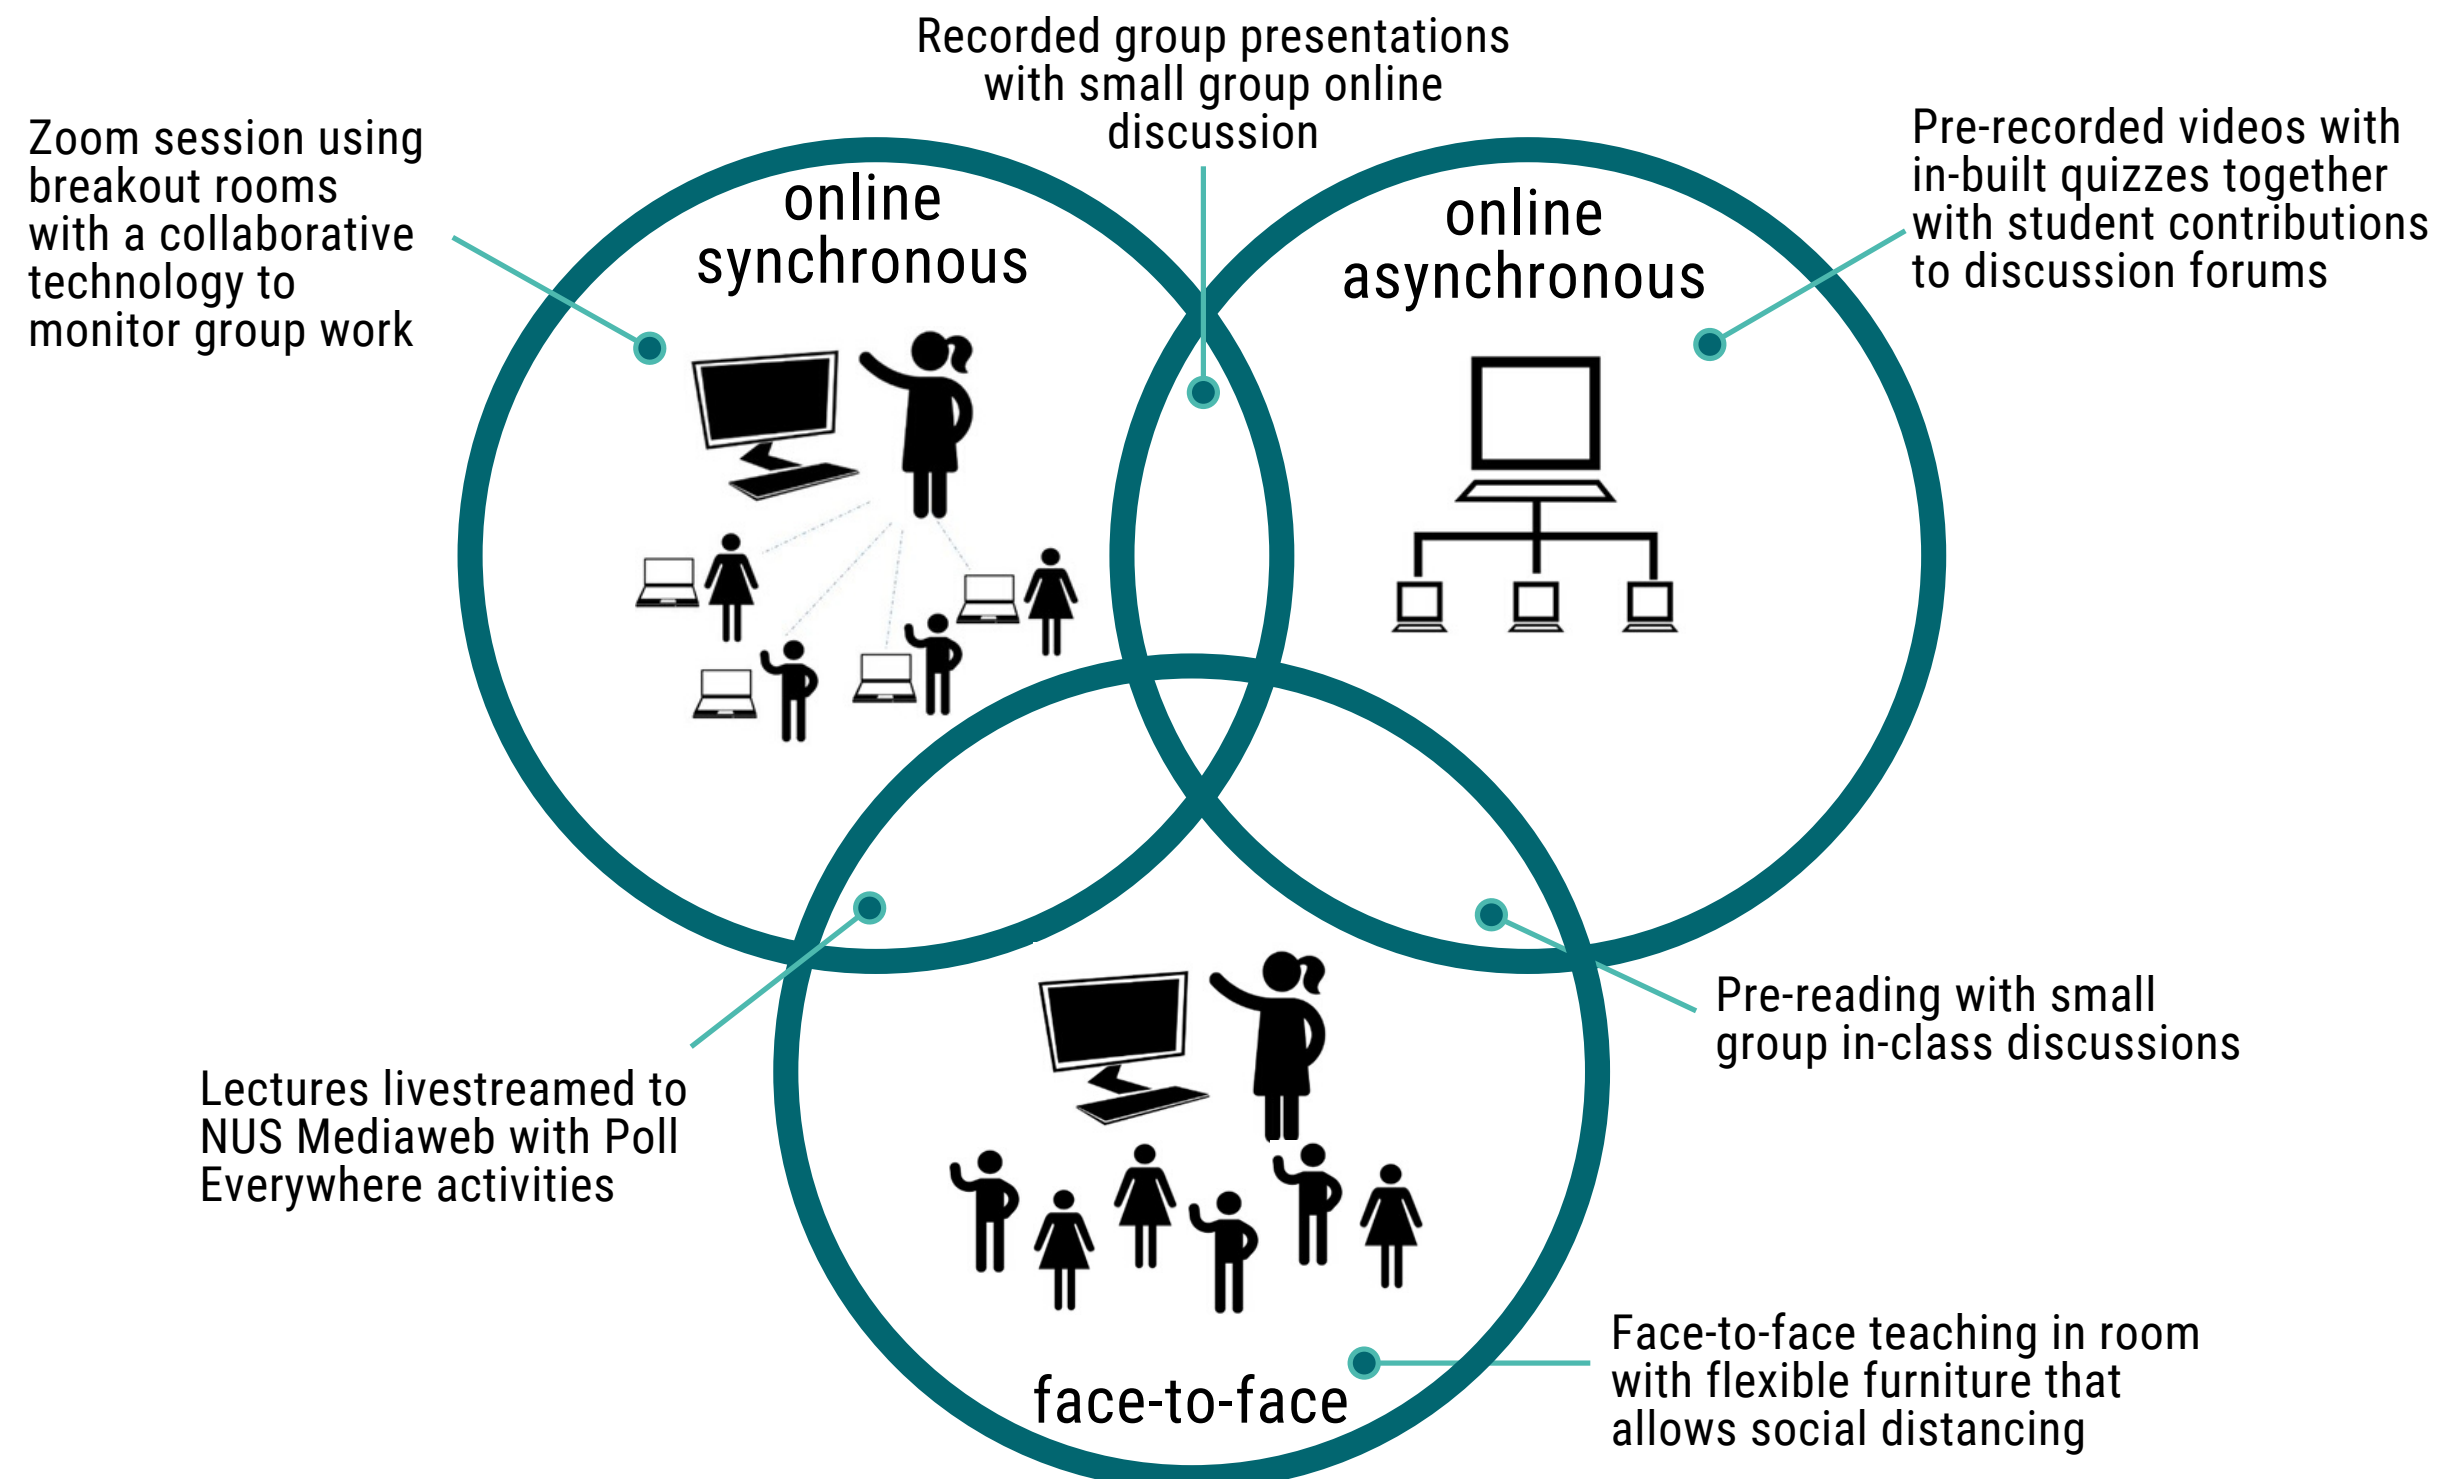

Utilise artefacts from learning activities in each participation mode as resources for all students

Accessibility

Equip students with technology skills and equitable access to all participation modes

Hybrid Teaching Scenario 1

- Pre-recorded lectures uploaded to LumiNUS to allow for in-built quizzes
- Weekly quiz to check for student readiness
- Livestreamed Zoom session with Poll Everywhere quizzes to resolve misconceptions
- Small-group face-to-face teaching for students who want an on-campus experience, and small group Zoom session using breakout rooms and Google Docs for students who want or only have access to an online experience

Hybrid Teaching Scenario 2

- Zoom lectures with Zoom Poll quizzes
- Synchronous combination of face-to-face and online students working in groups using Zoom breakout sessions to discuss case studies based on lecture material (recording provided for review purposes and for students who are not able to engage synchronously)
- Group project to develop a case study which is then presented on LumiNUS Forums
- Peer feedback on group project also provided on LumiNUS Forums
