How to Connect to eduroam - MacOS

Note: eduroam is the secure wireless network for our campus, for use by CofC students, staff, and faculty. Registered students, faculty, and staff must use eduroam to access the College of Charleston wireless network. Don’t forget that you can print from your own device, click here for details.

Connecting to eduroam

1. On your MacOS device select the wireless network icon
2. Select the eduroam network (We do not recommend students use cofc-guest because it is not encrypted and is not a secure connection)

**On campus recourses, like printers, are not accessible on cofc-guest network

3. Enter your email address for the username and your MyCharleston password for the password

**When you change your MyCharleston password, you will need to forget and then re-add the eduroam network to your computer

4. Select Remember this network
5. Click Join

Once you are connected to the eduroam network, you will see the internet icon bars filled

**First screenshot of network icon is empty signifying there is no internet connection.

For Students:

What is eduroam?

Is it Safe?
eduroam is encrypted using WPA2 AES Enterprise encryption standards. While this provides a level of security to your data, we cannot guarantee that your data is safe from breaches. Please take precautions to ensure that your data is protected.
