

- What are you proud of?

- The thing that our group was proud of was that we followed the plans we made correctly, and neat, and simple. For example, we planned to make the 3 layers with wax paper, bubble stuff, and silver tape. We tried to keep our prototype's shape, materials, etc.

- What would you do differently?

- If we have more time to fix, I would rather to make it more convenience. It's kind of hard to put it and take it off.

- What was the hardest thing about this project?

- I think the hardest thing was developing how to make it fit on the handle. Also, to glue materials wisely, make it clean. It was challenging us to make it simple/clean.

- What are some limitations your group experienced in this design challenge?

- To keep the temperature. It was quite hard to determine what material we should use. I think that's because we didn't had experience about making the heat stay. Maybe this could be another experience.
