Introduction

Improvisation is a platform for social diversity in the musicianship classroom that is inclusive of a variety of student abilities and musical interests. In the process, improvisation pedagogies build student confidence within and beyond the subject matter at hand because the improvised moment is experienced as the incarnation of an idea that is transformed into a technique.

The principal pedagogical mode of this curriculum will be vocal improvisation as means of achieving audiation, or the ability to hear music without making music.

Testimonial

Eureka is an incredibly valuable resource for teaching improvisation in the classroom. The on-line format offers clear and concise guidance while at the same time allowing room for each activity to adapt to the specific needs of the students.

The instructional templates are set up to provide flexible starting points in various topics that can be used to prepare the class, in both body and mind, to read, write and speak the language of music from a more comprehensive perspective.

Eureka is a tremendous classroom tool, providing instructors an engaging roadmap that will help them introduce and explore the extraordinary benefits of improvisation at any level.
