Professors’ Performance Using ICT in a College in Guadalajara, Mexico

Araceli Duran-Hernandez, University of Guadalajara
Jose de Jesus Urzua-Lopez, University of Guadalajara

ABSTRACT

The purpose of this research is to identify whether using information technology increases the competitiveness of professors in the field of education. The research shows that knowledge of automated resources and interconnection achieved through ICT improves competitiveness and diversity in the educational process.

Key words: Information and Communications Technology (ICT), competitiveness, resources.
