

NAME

**POPPLLET.com** is an open-source virtual space for synchronous and asynchronous collaboration, where teams can create one mindmap and add content from their own, personal, computer. In this exercise, teams work synchronously by accessing the one popplet created and adding information to the same board.

**Starting from the word CUT/SHOOT, depending on their assigned role, teams will:**

- Add as many known variations of the word, both from daily life usage and notes from videos, vocabulary handout, and class discussions, e.g. CUTting, match-CUT.
- Define each word and add a visual example, be it image, video, link to external source.

- All team members need to input as many entries as possible, without repeats.

\* Once the team agrees on a complete wordmap (no more variances can be generated), teams need to categorize each entry using a color-coding system, green=EGP, i.e. CUTting. and red=ESP, i.e. match-CUT.
