

Space / Materiality: Polyhedron Project Process

Jin Lee

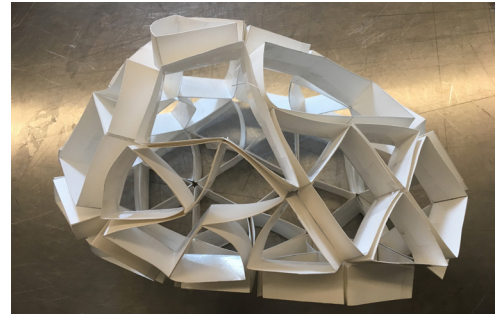

Polyhedron

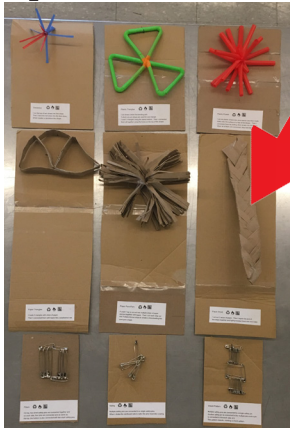

Polyhedron Open Cell Nets

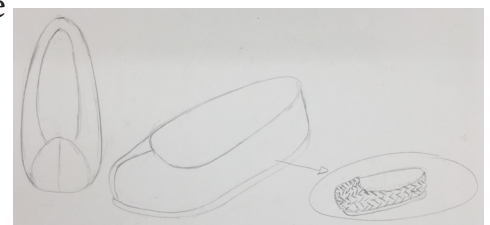

Manipulated Connected Polyhedron Open Cell

Closed Polyhedron Cell Net

Selected "Paper Braid" for the final piece

Sketch: Traditional Korean Footwear

Inspiration: 2 Different Styles of Korean Traditional Footwears

Left: The Korean lower class wore them in ancient times. They are made of rice straws woven together.

Right: The Korean upper class wore them in ancient times. They are made of leather and silk.

3 Different Materials Experiment

Final Piece: Korean Traditional Footwear

I combined two different styles of Korean traditional footwear. The idea of braiding strips of papers was inspired by the hand-woven rice straw shoes (the lower class shoes). I cut out strips of papers from the paper bags. Also, the color of my final piece is similar to the color of the rice straw shoes. The shape of the shoes (the final piece) was inspired by the upper class shoes. The shoes have pointed shape at the front end.
