

## **Infection Control Amplification in Nursing Centers**

See Something? Say Something. I CAN.

### **DAILY HUDDLE GUIDE**

*Infection preventionists: Use the outline below to support your daily huddles. You don't need to hand it out, but can use it as a guide. Each huddle will look different; this should be flexible guide that you adapt depending on the circumstances in your center and what you're learning from the infection control shift coaches.*

#### **1. Coach Report-Out (5-10 minutes)**

- Encourage every coach to share, even if others have shared the same observation
  
- Consider asking the coaches:
  - *What have you observed or heard from coaches on other shifts?*
  - *What problems are you seeing?*
  - *Are there any themes or trends you're noticing?*
  - *What solutions do you propose?*
  - *Are there any situations that you had a hard time resolving?*
  - *How can I help?*
  - *What do you need from me/us?*

#### **2. Infection Preventionist Guidance (5 minutes)**

- Close the loop on past actions, share any trends, and provide tips
  
- Consider asking yourself (and sharing):
  - *Have you noted any trends in coach observations, adherence data, or other info?*
  - *Have any issues come up on the COVID team, in survey, or elsewhere?*
  - *Do you have specific topics you want coaches to raise during shift huddles?*
  - *Do you have specific practices you want them to look for?*

#### **3. Action (2 minutes)**

- Note action items & proposed solutions
- Give thanks
