

Community Air Monitoring Program

Dates: July 30, 2018 to August 3, 2018

Date	Date		Analysis
	Background Corrected Particulate Concentrations (mg/m³)		Response Required?
	Daily Average	Daily Max	No
July 30, 2018	0.007	0.068	No
July 31, 2018	0.013	0.075	No
August 1, 2018	0.011	0.062	No
August 2, 2018	0.008	0.081	No
August 3, 2018	0.006	0.064	No

Air Quality Action Levels

Background corrected particulate concentration data from the site is compared to particulate action levels. This correction is calculated by subtracting the upwind concentration from the downwind concentration and provides the concentration of particulates being generated by site activities. The specific action levels and their response are as follows:

- Between 0.100 mg/m³ and 0.150 mg/m³ – Particulate suppression techniques instituted.
- Greater than 0.150 mg/m³ – Stop work and reevaluate activities

Inclement Weather

Monitoring is not conducted during rain and heavy snow events as precipitation acts as a natural suppressant and prevents the migration of particulates. In addition, moisture can impact the accuracy of the data from the monitors.
