Brief Description of Research Project	This project will study how the COVID-19 pandemic has affected both travel and pro-environmental preferences and how commuters interact with transportation infrastructure, with particular focus on sustainable transportation modes and how transit preferences evolve during the pandemic receding stage. A multi-wave survey of commuters will capture changes in behavior and priorities and how attitudes toward the environment and diseases shape mobility preferences over time. The collected data will be used to train a microeconomic model of welfare changes under the “new normal” of the mobility ecosystem.
