

METAMORA TOWNSHIP HIGH SCHOOL MATHEMATICS

Graphing Calculator Requirement

There are many graphing calculator options available to parents and students, and not all are equal in power and ease of use. It is also very confusing for students when in-class directions do not align with their calculator. To simplify the purchasing process for parents, the MTHS Math Department has created this document explaining the calculators that are acceptable for MTHS students. Students who are on free or reduced lunch that find the cost of these graphing calculators too burdensome will be offered the opportunity to check out a TI-nspire CX through the MTHS library. When you purchase a graphing calculator, please save the entire packaging to submit to your math teacher as they can redeem that packaging for free rewards for the school.

REQUIRED for ALL MTHS Mathematics Courses

TI-nspire or TI-nspire CX

For graphing calculators, there are two versions of the TI-nspire that are the BEST: the grayscale TI-nspire and the color TI-nspire CX. There is no significant difference between the two calculators other than the color capabilities of the CX version.

**Note: TI has announced the release of the TI-nspire CX II. As of May 2019, this graphing calculator is not available for purchase. Once it becomes available, it will be allowed.

Please be careful not to purchase a TI-nspire CAS or TI-nspire CX CAS because they are banned from all ACT tests. They are, however, allowed on the SAT and in Honors AP Statistics, Honors AP Calculus AB and Honors AP Calculus BC.
