

At the end of the semester, students doing an independent study as a technical elective will need to submit a 2-page report outlining their work for the semester or a conference abstract. This final report should be two pages and include details regarding the following topics:

1. An introduction to your research problem/area within the field of biomedical engineering at UD.
2. The specific research project/topic you were engaged in with a description of the semester's research goals or hypothesis. A brief description of the research methods you utilized, developed, modified, etc. to achieve these goals.
3. A brief description of the results of your semester's research project, including notable project outcomes, roadblocks and advances, research findings, and contributions to the overall research program of the laboratory.
4. A description of how the Independent Research experience has furthered your biomedical engineering education and how the course has influenced your academic/professional goals.
