PEDESTRIAN SAFETY ISLANDS
Limits the amount of pedestrian exposure in the streets
Information sourced from NACTO’s Urban Street Design Guide | https://nacto.org/

APPLICATION
As the number of travel lanes increases, pedestrians feel more exposed and less safe crossing the street.

DESIGN RECOMMENDATIONS
1. Safety Island should be at least 6 feet wide, and width of 8-10 feet.
2. Should have a 'nose', which extends passed the intersection
3. Should include curbs, bollards or other feature to protect people waiting
