

**DEPARTMENT OF MEDICAL AND  
MOLECULAR SCIENCES**

**MEDICAL DIAGNOSTICS  
STUDENT HANDBOOK**

---

Department of Medical and Molecular Sciences  
305 Willard Hall Education Building  
University of Delaware  
Newark, DE 19716  
(302) 831-2849

---

In order to facilitate the success and ensure the welfare of students in the Medical Diagnostics major and in their future careers, the policies stated herein have been adopted. Feel free to contact the Program Director if you have any questions concerning Department policies.

Please indicate your understanding of these policies by **signing** on the indicated space on **page 9** and **returning a copy of the signed document to Mrs. Diana Levering by either email or mail using the address below**. Keep a copy of the document for your records. Please **return** the signed copy of the document by **June 26<sup>th</sup>**.

## **Program Administrators**

### **Donald Lehman, Ed.D., MLS(ASCP)<sup>CM</sup>, SM(NRCM)**

Associate Professor

Medical Diagnostics Program Director

**DEPARTMENT OF MEDICAL AND MOLECULAR SCIENCES**  
**MISSION STATEMENT**

**The Department of Medical and Molecular Sciences is committed to providing skilled, critically-thinking practitioners equipped to be future leaders in health sciences. In this pursuit, the Department is committed to active engagement of undergraduate and graduate students in experiential learning, to forming collaborative partnerships with educational, clinical, industrial and research experts locally and globally, to discovering innovative breakthroughs in research that contribute to the health and basic sciences body of knowledge, and to functioning as an expert resource regarding all issues related to Medical and Molecular Science.**

---

## I. GOALS AND COMPETENCIES REQUIRED OF STUDENTS

---

It is the goal of the University of Delaware to encourage students to achieve their highest standard of scholarship and to help them assume responsibility for developing and achieving their own goals and objectives. In accordance with this, the primary educational goals of the Department of Medical and Molecular Sciences are to provide students with an excellent comprehensive education in medical diagnostics leading to a baccalaureate degree, to prepare students to function in professional positions as practitioners for the healthcare environment of the 21<sup>st</sup> century, and to prepare students to be life-long learners so as to remain current with advances in medical science.

The curriculum design assures student-oriented instruction in the pathology of disease and the theory of diagnostic laboratory procedures. The capstone course, MEDT 462 Experiential Learning, is a continuum of this specialized, medical education and is designed to broaden the student's education and experience. This approach to medical education enables students to graduate from the University prepared to enter professional and graduate schools.

The Medical Diagnostics major's educational objectives are listed below and encompass each area of laboratory services including clinical chemistry, hematology, hemostasis, immunohematology, immunology, microbiology, molecular diagnostics/genetics, urinalysis, and body fluids. To accomplish the educational goals of the program and some of the general education goals of the University, the curriculum incorporates cognitive competencies. After successfully attending lectures and completing assignments, the student will be able to:

- Utilize scientific principles (e.g., physiology, immunology, biochemistry, genetics, microbiology, etc.), laboratory principles, and methodologies as they apply to the clinical and medical settings.
- Interpret accurately laboratory test data and determine their clinical significance.
- Communicate, through oral and written skills, effectively and professionally to enable consultative and educational interactions with healthcare personnel, the public, and patients in order to function successfully as a member of the healthcare team.
- Demonstrate ethical behavior and professionalism, maintain confidentiality of patient information, and participate in continuing education for one's own professional career development.
- Develop skills and knowledge to become life-long learners.
- Evaluate published scientific studies utilizing knowledge of research design.

## General Education Goals of the University

After successfully attending lectures and completing assignments in the liberal arts courses, the student will be able to:

- Read critically, analyze arguments and information, & engage in constructive ideation.
- Communicate effectively in writing, orally, and through creative expression.
- Work collaboratively and independently within and across a variety of cultural contexts and a spectrum of differences.
- Critically evaluate the ethical implications of what they say and do.
- Reason quantitatively, computationally, and scientifically.

---

## II. ESSENTIAL FUNCTIONS REQUIRED OF STUDENTS

---

As a Medical Diagnostics major, you have chosen to pursue a healthcare profession, where honesty and integrity are critical personal characteristics required both in academic studies and in the practice of the medical profession. Successful students are self-sufficient, problem-solvers who like the challenge and responsibility that careers in healthcare provide. In order for graduates to maintain their competence, they need to be life-long learners. As a Medical Diagnostic student, you must develop skills and the know how to find information and to be self-learners. The principles that embody the Essential Functions are applicable to the many career opportunities that exist in healthcare. Physicians, physician assistants, dentists, optometrists, etc. need to possess the same qualities that are detailed in the Essential Functions including but not limited to manual dexterity, good eye-hand coordination, safe utilization of equipment, accuracy, maintaining composure in stressful situations, utilizing independent judgment, exercising good communication skills, demonstrating ability to comprehend scientific and medical information, and maintaining patient confidentiality. The Essential Functions are comprised of emotional and professional/intellectual demands and are the expectations for a student who plans to pursue graduate or professional school upon graduation.

The *emotional demands* required of students include the ability to:

1. Maintain composure and professionalism while providing appropriate services under stressful situations, such as time constraints, emergencies, rudeness, etc.
2. Utilize independent judgment and act logically in the performance of one's duties.
3. Organize and accept responsibility for one's work, including acknowledgement of errors or uncertainty and acceptance of constructive criticism.
4. Employ sufficient psychological stability to consistently and dependably utilize critical thinking in order to formulate and implement safe and ethical healthcare decisions in a variety of healthcare settings.

The *professional/intellectual demands* required of students include the ability to:

1. Communicate in a professional, positive, tactful manner with patients, physicians, nurses, and other healthcare and non-healthcare employees.
2. Communicate understandably, comprehend, and follow directions in English as evidenced by verbal, written, and reading skills.
3. Communicate, through the use of assistive devices (e.g., hearing aids, phone receivers, etc.) if needed, so as to converse understandably in English.
4. Maintain patient confidentiality and exercise ethical judgment, integrity, honesty, dependability, and accountability in the performance of one's responsibilities.
5. Demonstrate the intellectual skills required to comprehend scientific and medical information, perform mathematical calculations, analyze information, evaluate information, and use critical thinking skills to solve problems.
6. Maintain a well-groomed, neat, professional appearance.

---

### **III. HEALTH AND SAFETY REQUIREMENTS**

---

While not required in the undergraduate curriculum, many graduate educational programs that lead to healthcare careers, including those for physicians, physician assistants, dentists, optometrists, podiatrists, etc., require undergraduate students to experience the particular career by participating in clinically oriented activities. The number of clinical service hours performed and the type of facility in which the service is performed vary among the career options. Students should inquire about the clinical experience early in the freshman year to be sure that they meet the requirements of their chosen graduate education. The best way to obtain patient contact is by the student volunteering in a health-related environment such as a hospital, emergency department, ambulance corps, neighborhood clinic, physician's office, nursing home, etc.

- **Health Requirements**

To safeguard the health and safety of staff and patients when performing educational activities in the clinical setting, students may be required to have a routine physical examination before the start of volunteer activities. The physical examination provides verification that the student appears to be free from disease or any impediment which would interfere with normal activity, study, or physical effort.

- **Immunizations**

Before starting clinical activities, students may be required to have specific testing and/or immunization (or documentation thereof) for hepatitis B virus, tetanus, measles (rubeola), mumps, and rubella (MMR), varicella (chicken pox), influenza and tuberculosis (2-step PPD tuberculin skin test or QuantiFERON® test). Students might be required to submit documentation of immunity as evidenced by

positive immune titers for several of these diseases. For the safety of patients, healthcare institutions have the right to refuse student participation, if the student is unwilling to comply with immunization requirements.

Healthcare personnel are among those at increased risk for acquiring hepatitis B virus infection due to their frequent contact with human blood and other body fluids. A student who wishes to be immunized may receive the injections from his or her primary care provider. **Such immunizations should begin at least six months prior to volunteer activities.** Alternatively, the vaccine is available through Student Health Services paid for by the student. The vaccine is administered as a series of three injections given at appropriate intervals over a six-month period. If a student has been vaccinated previously, most hospitals will require a blood test to determine antibody titer to the hepatitis B virus.

- **Drug Screening, Criminal Background Check, and Other Requirements**

Before starting clinical activities, a student may be required to complete a urine drug screening and a criminal background check. There are some requirements that may be specific to certain healthcare institutions, including but not limited to: child abuse registry investigation and adult abuse registry investigation. For the safety of patients, healthcare institutions reserve the right to request a urine drug screening and such criminal/abusive background checks at the commencement of clinical activities.

- **Important Note**

Students should be aware that results from the criminal background check, urine drug screening, child abuse registry investigation and adult abuse registry investigation could negatively impact the student's ability to participate in clinical activities at healthcare institutions. In addition, candidates applying for employment in healthcare are typically required to undergo a criminal background check and urine drug screening. Each student should use sound judgment and avoid situations which could result in poor decisions. Failure to do so could jeopardize the student's ability to complete graduate medical education, thus impacting on future career goals in healthcare.

---

## **IV. ACADEMIC REQUIREMENTS**

---

- **Grading**

**Students must obtain a grade of C- or higher in each of the Department of Medical and Molecular Sciences (MEDT) courses to progress in the Medical Diagnostics major. A grade of C- requires attainment of a minimal grade of 70%. Grades are not curved. Medical and Molecular Sciences courses are offered only once a year.** To avoid problems that may impede progression in the major, a student who finds himself/herself in academic difficulty is encouraged to seek assistance from the Office of Academic Enrichment and the Center for Counseling and Student Development. **NOTE:** In accordance with University policy, courses taken at another institution must be graded C or better to transfer (a grade of C- is not acceptable for transfer).

See <http://www.udel.edu/registrar/transfer/transins.html>.

- **Lecture Attendance**

**Attendance at all Medical and Molecular Sciences lectures is highly recommended.** Individual faculty might require attendance. The student must abide by the regulations set forth in each Medical and Molecular Sciences course, so the student should consult the policy contained in each course manual. In general, absence from class due to illness, death of a family member, a personal emergency, or observance of a religious holiday will constitute cause for an excused absence. Examples of unexcused absences include but are not limited to scheduling routine medical and dental appointments, expanding spring break beyond its allotted time, or scheduling other travels for personal reasons.

- **Student Grievances and Disciplinary Action**

Honesty and reliability are essential in the medical profession, and these qualities are emphasized in all of the undergraduate professional courses. Any incidence of personal misconduct, suspected cheating on an examination, plagiarism, or any other form of academic dishonesty by a student will be communicated to the Office of Student Conduct. If warranted, the incidence may be adjudicated by the Undergraduate Student Conduct System. Determination of misconduct may result in an F in the course and automatic dismissal from the Medical Diagnostics major.

Student grievances are handled according to the policies of the Department of Medical and Molecular Sciences, the College of Health Sciences, and the University at large. Students should refer to the *University of Delaware Student Guide to University Policies* for detailed information on academic and non-academic grievance procedures (available at <http://www.udel.edu/stuguide/current>).

---

## V. PROFESSIONAL SCHOOL REQUIREMENTS

---

- **Health Professions Evaluation Committee**

A student whose educational goal is to attend a professional school, to include medical, dental, optometry, or podiatry, should become familiar with the Health Professions Evaluation Committee (HPEC) no later than the junior year. *Please note, students pursuing graduate education as a Physician Assistant are not expected to open a file with this Committee.* HPEC is a University committee composed of University faculty and local physicians, who evaluate the credentials of perspective candidates for medical and dental school admission. A junior student must complete their HPEC pre-med file, be interviewed by two HPEC members in preparation for the University's evaluation of the student's record, and take the appropriate standardized admission exam, e.g., MCAT, DAT, GRE. A student may open a HPEC file as early as the freshman year, most often during the sophomore year and no later than the junior year.

For additional information about HPEC, students are referred to [http://sites.udel.edu/healthpro/hpec\\_home](http://sites.udel.edu/healthpro/hpec_home)

- **Center for Health Profession Studies**

The Center for Health Profession Studies focuses on assisting students who are interested in careers in the health professions. The Center helps to assist students who want to pursue careers in medicine, dentistry, optometry, podiatry, physician assistant, advanced practice registered nurse, pharmacy, physical/occupational therapy and other health profession programs.

For additional information about the Center for Health Profession Studies, students are referred to <https://sites.udel.edu/healthpro>.
