

Open Rank Faculty Opportunities

Division of Public Health Sciences

The Division of Public Health Sciences in the Department of Surgery at the Washington University School of Medicine in St. Louis invites applications for multiple tenure-track/tenured positions at the rank of Assistant, Associate or Full Professor. The School of Medicine has a strong team of public health researchers and an outstanding record of biomedical and social science research that range from biology to genomics to social determinants of health, implementation, and population sciences. Many of the research programs address health disparities and integrate community-based strategies. The diverse faculty in the Division collaborate with departments across the medical and university campuses through research projects, teaching, and mentoring. We also lead studies across regional health systems, including rural and underserved populations with a strong focus on community impact.

Successful candidates should have:

- A doctoral degree in public health, psychology, epidemiology, applied anthropology, or related field;
- A demonstrated track record of research excellence;
- Excellent oral and written communication skills.

To Apply

Send:

- Cover letter
- Curriculum vitae
- List of professional references

By email to v.singer@wustl.edu

In addition to research commitment, the candidates will have a strong interest in teaching and mentoring graduate students and a desire as well as demonstrated ability to collaborate with research investigators in public health and/or medical fields of study. Candidates should be committed to building strategic partnerships across communities.

We are particularly interested in candidates with expertise in health equity, race and socioeconomic disparities in cancer, racial and social inequalities as they impact health, implementation science, and interventions across the cancer care continuum.

About the Division of Public Health Sciences

The Division of Public Health Sciences is rich with opportunity for innovative research and conducts transdisciplinary research addressing cancer risk across the life course and across generations, from conception to workplace and survivorship. A growing focus on methods for implementation science brings investigators together across campus, and regional health care providers. The Siteman Cancer Center Prevention and Control program has primary focus on cancer health disparities, methods for implementation science, and tobacco control and other lifestyle interventions. The program includes investigators who are studying the relations among biological, genetic, psychological, and epidemiological factors. Studies range from genetic investigations to clinical outcomes and community-based participatory research.

Washington University offers excellent benefits and competitive salaries. Faculty positions offer the opportunity to collaborate with bench scientists, clinicians, pathologists, geneticists, imaging scientists, epidemiologists, social and behavioral scientists, and other cancer center members. Faculty may have protected time to develop externally funded research and can participate in teaching.
