MASTER OF SCIENCE IN Biomedical Informatics

Health and life sciences are experiencing a fundamental shift toward transdisciplinary and data-intensive approaches to research. Learn skills that set you apart with field-leading faculty at Washington University School of Medicine, nationally ranked in the top ten for medical research.

Full or part-time study • 36 credit hours

• Tailor the curriculum to your individual needs, interests, and experience
• Gain valuable experience solving real-world problems through internships and mentored research
• Learn from multidisciplinary faculty in informatics, biostatistics, genetics, medicine, public health, and more
• Choose from three tracks: population health informatics, translational bioinformatics, and applied clinical informatics

“The MS in Biomedical Informatics provides the concepts and practice to confidently access and analyze health data with clinicians.”

DOUGLAS CARUTHERS, MS ’22
