

Connecting Devices in *Coast to Coast*

After a participant registers their account, they'll land on the Getting Started page. From here, they'll have the ability to choose between connecting a device or logging manually.

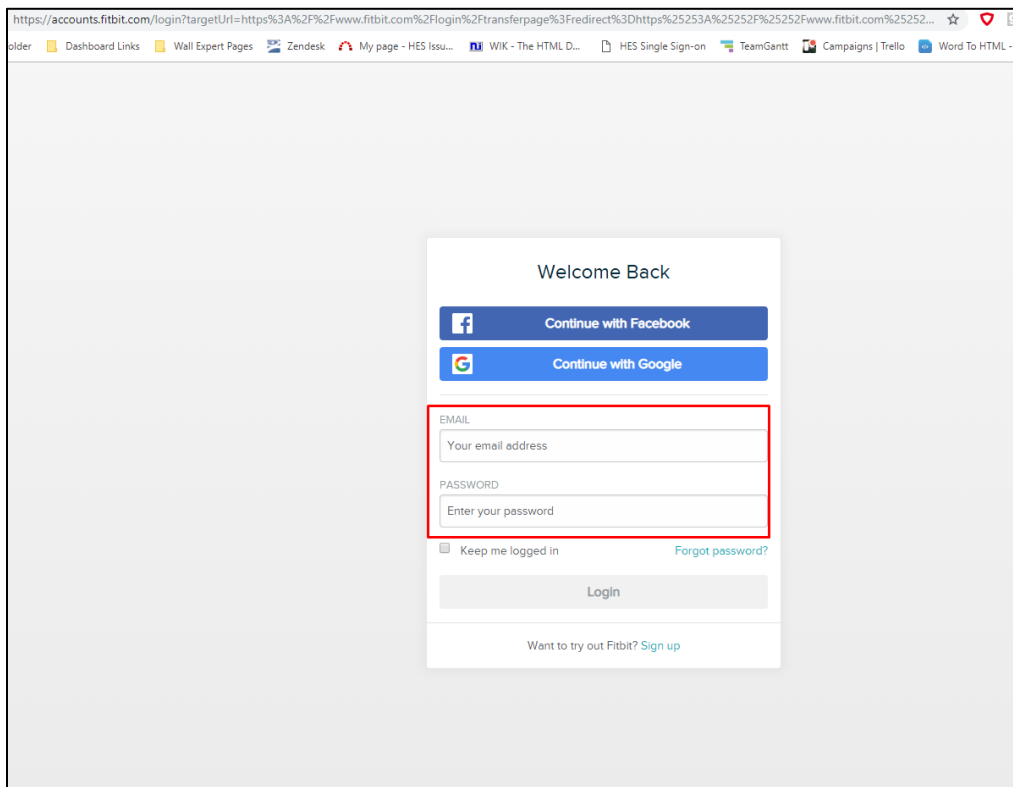

If a participant wants to connect their tracking device, they'll click "Connect Your Device/App". The below window will appear. Click "Connect" under the appropriate device account. For this example, we'll use Fitbit.

***Please note:** to connect to Apple Health (either for your Apple watch or using the Apple Health App) a participant will first need to download the *Coast to Coast* app, then they can connect from their settings page.

When “Connect” is selected under Fitbit, you’re prompted to log into your Fitbit.com account. You’ll enter your Fitbit.com account credentials and then click “Login”.

After providing your Fitbit.com account credentials, you’re directed back to *Coast to Coast* and the below “Connection Successful” pop-up appears.

Getting Started

Connection Successful

Your Fitbit® tracker is now connected to *Coast to Coast*.

Put on your Fitbit in the morning, then watch your steps add up.

Note: Although the Fitbit tracks more, only steps count toward points in *Coast to Coast*.

No further action is needed until logging begins. Once logging starts, **you'll need to sync your Fitbit device with your Fitbit account to have your step data pull over.** This applies for all devices connected to *Coast to Coast*.
