January 9, 2019

Dear Alfalfa Variety Testing Cooperators,

One new alfalfa variety trial will be planted in the spring of 2019 at Wooster, Ohio. The trial will be a standard trial (**sprayed for insect control**); duration will be 4-years, assuming adequate stand and persistence. Potato Leafhopper (PLH) varieties will be treated with insecticide unless sufficient entries are entered to warrant separation.

Attached please find the appropriate entry form and fee payment information. Return the completed entry forms, seed and fee payment by March 1, 2019 to the address on the application form. Make checks payable to The Ohio State University.

We look forward to your participation in our trials. Your cooperation and support is greatly appreciated. If you have any questions or comments, feel free to contact me at: e-mail, [mccormick.44@osu.edu](mailto:mccormick.44@osu.edu) or phone (614) 325-6740.

Results and downloadable files are available on the web [u.osu.edu/perf/](http://u.osu.edu/perf/). Web site information will include the list of marketers for each variety and a link to their website, as provided on the application form. For increased exposure to your products, please provide website address. Copies will also be sent via e-mail to each participant soon after the last harvest.

We have made the application available on the web at [u.osu.edu/perfentry/](http://u.osu.edu/perfentry/). The web version is a PDF file where you can list your entries then e-mail the application to [mccormick.44@osu.edu](mailto:mccormick.44@osu.edu).

## Ohio Alfalfa Variety Evaluation Trials

**Objective:** To collect dry matter yield data on alfalfa varieties so that Ohio producers can select the variety which best suits their needs, while providing breeders and researchers with information to assist them in determining the area of adaptation for experimental lines.

**Test Site:** Wooster, Ohio.

**Entry Fee:** \$485 for each alfalfa variety entry.

**Eligible Entries:** Experimental and commercial alfalfa varieties.

**Seeding Details:** Trial will be spring-seeded at 16 lbs/acre. Individual plot size will be 4 x 20 feet. A randomized complete block design with four replications will be used and data will be analyzed using Nearest Neighbor AOV. Soil fertility, insect and weed control, and harvest management will be according to recommendations of The Ohio State University Extension.

**Trial Duration:** Seeding year plus three years after establishment.

**Insecticide Use:** Standard Trial (**sprayed**): Insecticide will be used to control all pests.

**Seed Requirements:** 100 grams of seed per entry. Seed of experimental and commercial varieties needs to come from the breeder or marketer of each variety. We will inoculate seed with Rhizobium before planting, but no other seed treatments will be applied by OSU.

**Data Collection:**

Alfalfa variety trials:

Forage DM yield, 2 cuts seeding year, 3 or 4 cuts the following years (at early flower).

Visual (% stand) density in the fall.

**Publication of Results:** Data will be compiled annually and a summary supplied to each participant. In addition, variety test data for commercial entries will be published in an annual Ohio State University Forage Performance Report for state and regional distribution, including publication on the Internet at <https://u.osu.edu/perf/> and in Ohio's Country Journal magazine in December each year.
