

Hemlock Woolly Adelgid

A pest threatening the hemlocks in the Hocking Hills

- Experience the magnificent hemlock forests of Camp Oty'Okwa
- Understand the importance of hemlock trees to tourism and the environment in Ohio and the Hocking Hills
- Become aware of the serious threat that Hemlock Woolly Adelgid (HWA), a nonnative invasive insect, poses to hemlock trees in the eastern US
- Receive updates on the current status of HWA in Ohio and within the Hocking Hills
- Learn about Ohio's Efforts to proactively manage HWA
- Find out about future training opportunities focused on treating HWA
- Join in our effort to detect this pest and spread the word

Thursday-April 5th, 2018
