<sup>1</sup> Color code: For resistance management, rotate among products from different chemical groups: spinosyns (yellow in chart below), pyrethroids (pink in chart), organophosphates (blue in chart), carbamates (green in chart), and neonicotinoids (gray in chart).

<sup>2</sup> The pre-harvest interval (PHI) is the minimum number of days required to wait after application of the pesticide, before it is safe to harvest. An 'X' in chart means that the product is **not allowed** for use on that crop.
