UTHA Cohort Study Manuscript Application

If you wish to write a manuscript using the UTHA Cohort study data, please prepare a one page description of the analysis. Please include the following (or equivalent level of detail for your particular planned manuscript):

a) name and email address
b) working title/proposed analysis
c) exposure and outcome;
d) study population (including key restrictions on the analysis population, if using a subset of the existing dataset);
e) 1-2 paragraphs describing the rationale behind the question and your interest in it, a summary of existing published information, and the potential relevance of the results;
f) timeline for manuscript submission;
g) planned co-authors (not binding, nor is the order of authors).

Each proposal will be reviewed by a sub-set of the UTHA Principal Investigators (Drs. Norris, Turner, Kwiek, Casterline, Peters, Phuka). If approved, you will have the opportunity to do that analysis. Approval will have an “expiration date” after which, if the paper remains unwritten, the PIs have the option to give the topic to someone else.
