Child Trauma Screening Training Summary

Purpose

This training addressed a screening tool for children who have experienced trauma and adverse childhood experiences. The tool supports appropriate triaging of services and/or referrals. This tool was chosen for use in the OhioSTART initiative to help caseworkers better identify trauma exposure in the children they serve.

Results

Overall Knowledge Change

- Average number of correct responses out of 15:
  - Pre-tests: 7.22
  - Post-tests: 9.10

- Overall Knowledge Change: 26.0% (Statistically sig p < .001)

Completed Pre & Post Tests

- Number of completed tests:
  - Pre-tests: 98
  - Post-tests: 100
  - Pre- & Post-Test Pairs: 96

- 93% completion rate

Key Findings

Question 1

Which of the following is NOT a key component of resiliency-based case planning? Self-control.

- Pre-tests: 21%
- Post-tests: 64%
- % Correct: 43%

Question 2

Trauma-informed paradigm is resiliency-focused.

- Pre-tests: 12%
- Post-tests: 48%
- % Correct: 36%
