Written by an unbiased OSU Librarian. It covers a testimonial and an estimation of the Prof Ockerman’s effect in the world’s Food Supply and Food safety by Dr. Ockerman’s and his team’s influence. A rough estimate in 1998.

133,308,000 Individuals (1998)

The author indicates that there could be errors both positive and negative (this could be caused by old or inaccurate base data). Even if negative it is still is a very large number of individuals.

The previous Librarian is currently not available but her techniques are used to update the number of people influenced.

6,832,432,000 Individuals (2019)

Like the pervious estimation this is an education estuation guess and is subject to the came positive and negative errors mention previously
