

Biosecurity for Birds

Educational Resources for Fairs & Shows

When it comes to disease threats, you are your flock's best protection. Biosecurity – practiced carefully and regularly — is key to protecting backyard birds from infectious disease carried to and from fairs, shows, farms, and backyards by people, animals, equipment or vehicles.

With show season underway, bird owners should be aware of the increased exposure and take steps to limit spread of germs and disease by following good biosecurity practices at all times.

The U.S. Department of Agriculture Animal and Plant Health Inspection Service (USDA-APHIS) "Biosecurity for Birds" campaign includes social media resources on biosecurity and practices. We hope you will take part in promoting biosecurity practices in fairs and shows by sharing these resources on your channels and with your readers. Here are a few ways you can help:

FOLLOW #Biosecurity

- Follow and share your biosecurity tips and practices using #biosecurity.
- Browse and download resources from our website: <http://1.usa.gov/1TfwKCu>
- Follow us on Twitter: [@Healthy_Harry](https://twitter.com/Healthy_Harry)

POST

Use or customize these sample Facebook posts to increase awareness of the importance of biosecurity when participating in county fairs or bird shows and transporting chickens, ducks or other poultry from place-to-place.

While transporting birds, exposure to diseases is increased. Keep your birds separated for at least two weeks to prevent disease. It's important to include #biosecurity practices in your daily routine to protect your birds' safety. We are the best protection our birds have. Learn how to practice good #biosecurity at: <http://bit.ly/2cQlgaG>

Fair & Show Season is underway, which means birds traveling for the spring have the potential to spread disease. Keep your flock disease-free this spring by incorporating biosecurity basics into your daily routines! <http://bit.ly/2qUfaMG>

Keeping flocks healthy should be a top priority for all backyard bird owners. The best way to protect your birds is to continually follow comprehensive and consistent biosecurity practices like washing your hands and not sharing equipment. Even if you are already familiar with biosecurity, it is always good to double-check your practices. You are the best protection your birds have! <http://bit.ly/1TKUUD1>

HOW AVIAN INFLUENZA CAN SPREAD TO BACKYARD BIRDS

1 DIRECTLY

- As a result of contact between a sick or infected bird and a healthy bird or between carrier birds (those that already carry the disease but show no signs of illness) and healthy birds;
- Contact with infected manure, litter, debris, or feathers;
- Aerosol transmission through respiratory droplets.

2 INDIRECTLY

- Virus-bearing material picked up on shoes, clothing, hands, and vehicles is then carried to healthy birds.

3 OTHER CARRIERS

- Wild animals, rodents, and insects

why is biosecurity so important?

Biosecurity is essential to preventing occurrences of diseases within backyard birds.

Backyard flocks are **rising in numbers** and are expected to increase by **400%** over a 5 year period

57 Salmonella outbreaks have been linked to live poultry since the 1990s.

Migratory fowl often carry disease such as Avian Influenza and Newcastle Disease.

Avian Influenza can survive **long periods** at **low temperatures**.

A GUIDE TO KEEPING BACKYARD BIRDS & BIRD OWNERS HEALTHY

do	don't
<ul style="list-style-type: none">Do wash hands thoroughly with soap and water right after touching live poultry, and supervise hand washing for young children.Do thoroughly cook eggs from hens.Do clean any equipment or materials associated with raising or caring for live poultry.Do assume live poultry is contaminated, and take proper steps to clean and disinfect regularly.Do source birds from NPIP Salmonella monitored program hatcheries.	<ul style="list-style-type: none">Don't let children younger than five, older adults or people with weak immune systems touch live poultry.Don't eat or drink in areas where birds live or roam.Don't keep chicks and ducklings inside living areas, such as bathrooms and kitchens.Don't kiss or snuggle a bird.Don't wait to report sick birds, call the USDA's toll-free hotline at 1 (866) 536-7593, or locate a local veterinarian or cooperative extension office.

VISIT HEALTHYBIRDS.APHIS.USDA.GOV FOR MORE INFORMATION

bio + security = life + safeguarding or protecting

Don't be a **chicken**, help **protect** your backyard birds!

Spring migration is underway, and there is an increased chance of disease as wild birds are in flight. Good biosecurity can reduce the spread of infectious disease.

Visit healthybirds.aphis.usda.gov for more information.

Thank you for helping promote biosecurity during event season this year!
