About us

About ten miles southwest of London, OH is the Ohio Heifer Center, which is one of five farms owned by ST Genetics. It was purchased in the Fall of 2010 and is the largest of the five farms as it houses almost 5,000 animals. OHC started as an ordinary dairy farm but has since began practices that go above and beyond ordinary.

Animal research is a large part of what we do; from feed efficiency to genomics. We work hard to provide quality data in order to find quality results.

We strive to create a work place that is enjoyable yet learning intensive.
