SOFTWARE RELEASES

- Simulator of Quantum Network Communication (SeQUeNcE): simulator created by a team led by Suchara suitable for simulation of quantum network prototypes that captures the breadth of current and future network technologies, protocols, and architectures. The tool is [available on GitHub](#) and consists of 16,909 lines of Python code and 1,281 commits. A parallel version of the simulator that uses MPI for cross-process synchronization [is also available](#) and allows parallel simulation with hundreds of processes.
- Q-SPLIT: a suite of algorithms and software tools created by a team led by Suchara that split large quantum circuits into smaller subcircuits that solve an equivalent problem, consisting of 4,273 lines of Python code and 179 commits. Select tools were publicly [released on GitHub](#).
