LETTER FROM CHAS DIRECTORSHIP

The Center for Health Administration Studies at The University of Chicago has been a leader for over 75 years in research and education in health policy and services. With its programs for supporting faculty research, engaging interdisciplinary inquiry, disseminating research, as well as promoting student learning, CHAS continues to explore new questions, identify knowledge gaps, and seek to enhance the translation of research to policy and practice focused on enhancing health care for the disadvantaged.

On March 23, 2010, President Obama signed the Patient Protection and Affordable Care Act (ACA) into law after at least 50 years of research and advocacy by a range of institutions and research centers, including CHAS. Perhaps the most significant health and welfare policy reform since the New Deal, the passage of the ACA has resulted in nearly 20 million uninsured individuals who have gained health insurance coverage. The work of CHAS continues to build on the rich tradition described so well in 1966 by health policy visionary and CHAS founder Odin W. Anderson. He described the basic value guiding health policy research in the United States: *That all people should have equal access to health services regardless of financial status*. This historic commitment to health equity can be found in all aspects of the work of CHAS.

Innovative health policy and services research was supported again this year through the CHAS Seed Grant Program. The 2015-16 program supported research on racial and gender disparities in suicidal behaviors in prisons, mental health services reform for undocumented Mexicans, racial disparities in predictive biomarkers, access to precision medicine, and cancer outcomes. This year, the CHAS-sponsored Michael Davis Lecture Series brought distinguished health policy and services researchers to the University. And finally, through partnerships and co-sponsorship, CHAS supported a series of important workshops and conferences including the *CHAS-SciencesPo Workshop on Policy Innovation and Reform*, the *Big Data in Health Workshop*, the *Booth School's Healthcare Group's annual conference*, and the *Chronic Disease Center's Annual Research Symposium*.

An intentionally interdisciplinary health policy and services research center located in a graduate school of social work is a unique institutional form that both exploits and enriches the values and orientation of the University of Chicago. We are proud that, in 2016, we engaged CHAS faculty and fellows along with health policy and services researchers from across the University of Chicago and around the world to engage in and advance innovative health policy and services research.

Building on its rich tradition, CHAS continues to support and advance research, disseminate knowledge and promote learning and teaching to promote quality health care for all.

Jeanne C. Marsh, PhD, MSW
Director

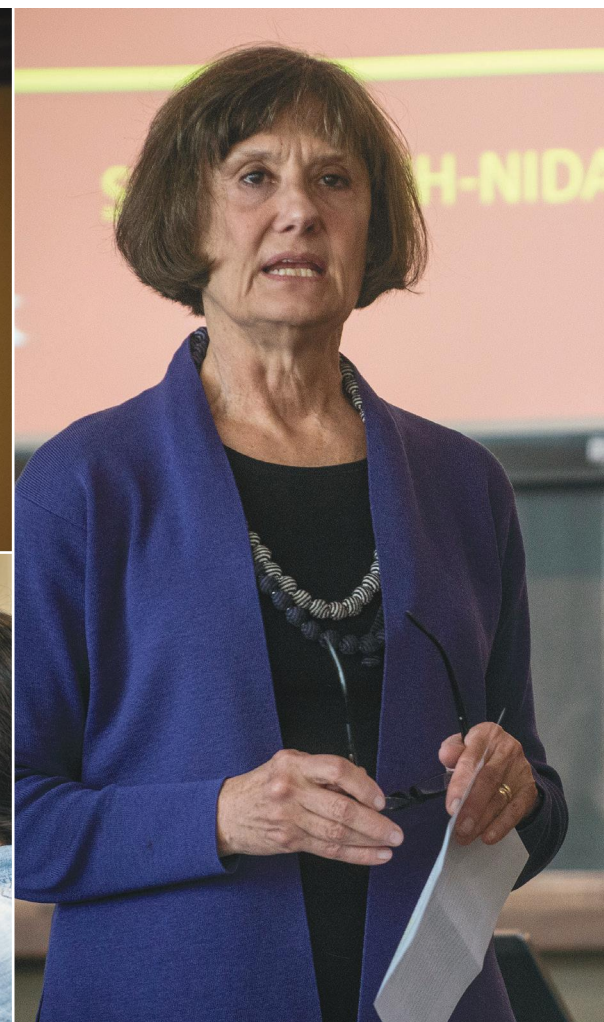

Colleen Grogan, PhD
Co-Director

CHAS 2016 HIGHLIGHTS

The CENTER FOR HEALTH ADMINISTRATION STUDIES at The University of Chicago contributes to the development of the US health care system by advancing health policy and services research, supporting innovative inquiry, disseminating research, and supporting programs of teaching and learning.

ADVANCING HEALTH POLICY AND SERVICES RESEARCH

FACULTY SEED GRANTS

Innovative research is supported each year through the CHAS Seed Grant Program. The program supports interdisciplinary research projects designed to lead to larger, more complex projects. The distinction of University of Chicago investigators and diversity of topics represented by the Seed Grants reflect the focus of CHAS on health access, cost, quality, behavioral health and integrated services.

Asthma Policy in Schools*

MEDICAID MAX WORKING GROUP

The CENTER FOR HEALTH ADMINISTRATION STUDIES recognizes that as Medicaid plays an increasingly central role in U.S. health care, it will be imperative to conduct national studies to analyze the costs and quality of care delivered to program enrollees and to understand large-scale changes in the prevalence of disease among the Medicaid population. The essential tools needed for these analyses and understanding are the volumes of patient data generated across the country in claims files called Medicaid Analytic eXtract (MAX) files.

L to R clockwise: CHAS Fellow and Public Health Sciences faculty member Dr. Kao-Ping Chua; CHAS Fellow and Public Health Sciences faculty member R. Tamara Konetzka

CHAS is supporting an interdisciplinary working group of faculty and Fellows to bring to the University of Chicago the most recent Centers for Medicare & Medicaid Services' MAX files for as many of the nation's 50 states as is currently available. The group will be among the first to use a national panel of MAX files to assess program-wide performance and disease prevalence both at a single point in time and over several years. The working group's findings will allow state Medicaid programs and federal policymakers to understand how shifts in the external policy environment are impacting the care of Medicaid beneficiaries, and will additionally facilitate efforts to identify opportunities to improve the coordination of resources for the growing Medicaid population. Some long-term research goals include examining trends in the quality of care delivered to pediatric and adult Medicaid beneficiaries in the inpatient, outpatient, and long-term care settings, to examine trends in health care utilization and expenditures in the Medicaid program, and to examine trends in disease prevalence among Medicaid beneficiaries.

SUPPORTING INNOVATIVE INQUIRY

Motivating the development of two major health policy and services workshops was the belief that discussion and debate of emerging research findings is the crucible for advancing health system reform.

CHAS-SCIENCES PO WORKSHOP ON POLICY INNOVATION AND REFORM

May 26-27, 2016

The University of Chicago Center in Paris

The health and social service sectors in the U.S. and France represent large and dynamic sectors characterized by high levels of policy innovation and reform. Research and evaluation of health policy and health care reform is fundamental to democracy as well as necessary for the development of accessible, high quality and cost effective-services. In both US and France, research and evaluation has contributed to reforms in health and social service policy. However, the process by which social science research and evaluation can and does influence health policy innovation and reform is understudied and minimally understood. The focus of this **University of Chicago-Science Po Workshop** was to bring together on a regular basis health policy researchers and scholars from US and France to share recent and cutting edge work in a deliberately comparative and collaborative context.

SUPPORTING INNOVATIVE INQUIRY

BIG DATA IN HEALTH WORKSHOP

August 4, 2016 • University of Chicago Gleacher Center

The Center for Health Administration Studies (CHAS) partnered with the Computation Institute (CI) to co-host the Big Data in Health Workshop, a summer workshop event, with three goals: (1) to broaden the way we think about interdisciplinary collaboration necessary to advance data science at the University; (2) to build on ongoing data science projects; and (3) to stimulate new big data collaborations in health and health policy. As a health policy center, CHAS is well-positioned to coordinate the assembly of the University of Chicago's computational and behavioral and social science faculty to promote research and encourage collaborations between schools and departments. Select researchers and experts associated with various "big data" applications on campus, including cloud computing, informatics, EMRs, genomics, preventative analytics and evidence-based projects, were invited for a day of presentations and discussions to understand the state of big data on campus. Participants were eager to continue interdisciplinary events in the future and to use the workshop as a springboard to develop future conversations in analyzing health policy data.

CHAS actively pursues partnership and co-sponsorships with health policy researchers and centers interested in pursuing ambitious project in the CHAS areas of focus. Partnerships developed reflect the diversity significance of topics of concern to CHAS: health policy innovation and reform, health and social service integration, health access, cost and quality, behavioral health, global health and preventive intervention.

PARTICIPANTS

Adelman, Daniel, PhD, MSc

Charles I. Clough, Jr. Professor of Operations Management, *The University of Chicago Booth School of Business*; Fellow, Center for Health Administration Studies

Botwinick, Laura, MS

Director, Graduate Program in Health Administration and Policy, *School of Social Service Administration*

GPHAP, GRADUATE PROGRAM IN HEALTH ADMINISTRATION AND POLICY

CHAS supports an innovative health policy and research training program for graduate professional students at the University of Chicago. GPHAP is unique among health administration programs in the United States as it allows students to earn a Certificate in Health Administration and Policy (GPHAP) or a Certificate in Health Administration and Policy with a Concentration in Global Health, while earning a degree in one of the participating University of Chicago graduate professional schools: Booth School of Business, Harris School of Public Policy, Law School, Pritzker School of Medicine, and School of Social Service Administration.

DISSEMINATING HEALTH POLICY AND SERVICES RESEARCH

Michael M. Davis lecture perspective

Co-Sponsorships: CHAS has continued to support and promote collaborative Centers and Institutes across campus. Recently, the Center for Translational and Policy Research of Chronic Diseases held the 4th Annual Research Symposium, “What’s Next for Obamacare? The Future of Insurance Coverage and Healthcare.” Additionally, CHAS once again provided supported for the Booth School of Business’ Healthcare Groups’ annual conference.

Michael Davis Lecture Archives: CHAS-sponsored Michael M. Davis Lecture Series brings distinguished policy experts and researchers to the University to explore the intersection of health policy and services and the broad needs of vulnerable and disadvantaged populations. Michael M. Davis Lecture Archives is a repository of videos and slides presentations from the lecture series that can be found on the CHAS website.

CHAS Historical Documents and Publications in Regenstein Library Special Collections: Of interest to historians and health policy and service analysts are the books, articles and reports published since the founding of CHAS that are listed in on the CHAS website and available through Regenstein Library Special Collections.

CHAS eNews: On topics as diverse as social work’s role in implementing the Affordable Care Act to a comparative analysis of health care reform in France and the U.S., CHAS sponsors and supports research conferences to bring evidence to bear on emerging trends and issues in health policy and services. These educational and training opportunities convene today’s leaders and prepare tomorrow’s to operate in multiple sectors including social service, business, law, medicine, and public policy.

Significant research findings from CHAS faculty and fellows are featured monthly in sections entitled **POLICY BRIEFS** and **SERVICE INNOVATIONS**.

POLICY BRIEFS

South Side Community Engages Research Infrastructure and Sustainability
The South Side Health and Vitality Studies Initiative (SSHVS) is designed to integrate those living in Chicago’s South Side into ongoing health research so as to better identify and serve the prioritized needs of the region. **Dr. Doriane Miller** (Dept. of Medicine), along additional CHAS Fellows **Dr. Marshall Chin** and **Dr. John Schneider**, use the SSHVS as a case study to show how academic bodies can work together with local residents to build a “sustainable, large scale community health research infrastructure” and respond to the NIH’s challenge to produce evidence-based interventions to reduce disproportionate health issues in various populations. For more, please see: Lindau, S.T., Maketkar, J.A., Chin, M.H., Desautels, S., Johnson, D., Johnson Jr., W.E., Miller, D., Peters, S., Robinson, C., Schneider, J., Thacklin, F., Watson, N.P., Wolfe, M., Whitaker, E. (2011) *Building Community-Engaged Health Research and Discovery Infrastructure on the South Side of Chicago: Science in Service to Community Priorities*. *Preventative Medicine*, 52, (3-4), 200-207.
