It is impossible to understand modern economics without knowledge of the basic tools of game theory and mechanism design. This book provides a graduate-level introduction to the economic modeling of strategic behavior. The goal is to teach Economics doctoral students the tools of game theory and mechanism design that all economists should know.

**Readership:** Graduate and doctoral students interested in microeconomics, game theory, and mechanism design.

**Contents**

- Chapter 1: Normal and Extensive Form Games
- Chapter 2: A First Look at Equilibrium
- Chapter 3: Games with Nature
- Chapter 4: Nash Equilibrium: Existence and Foundations
- Chapter 5: Nash Equilibrium Refinements in Dynamic Games
- Chapter 6: Signaling
- Chapter 7: Repeated Games
- Chapter 8: Topics in Dynamic Games
- Chapter 9: Bargaining
- Chapter 10: Introduction to Mechanism Design
- Chapter 11: Dominant Strategy Mechanism Design
- Chapter 12: Bayesian Mechanism Design
- Chapter 13: Principal Agency
