

1) Vm_mdd_final.m - Discovered by Boriss Siliverstovs, KOF ETH Zurich

In the file vm_mdd_final.m in the folder ~\MF_VAR_2013\Main Files\

Lines 84-95

```
[up sp vp] = svd(drawsig);  
drawsiginv = zeros(size(drawsig));  
drawsigdet = zeros(size(drawsig));  
for j=1:size(drawsig,1)  
    if drawsig(j,j) > 1e-12  
        drawsiginv(j,j) = 1./sp(j,j);  
        drawsigdet(j,j) = sp(j,j);  
    else  
        drawsigdet(j,j) = 1;  
    end  
end  
end
```

I suspect that the if-condition in the loop should be

```
for j=1:size(drawsig,1)  
    if sp(j,j) > 1e-12  
        drawsiginv(j,j) = 1./sp(j,j);  
        drawsigdet(j,j) = sp(j,j);  
    else  
        drawsigdet(j,j) = 1;  
    end  
end  
end
```
