2019 Summer Science Reading Assignment

(for Shiny New Seniors)

Book: Surely You're Joking, Mr. Feynman
Author: Richard P. Feynman
ISBN-13: 978-0393316049
Price through Amazon.com ≈ \$10 (or PDF available for free)

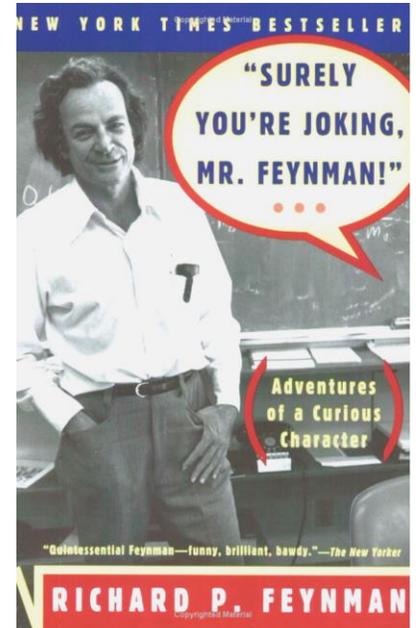

The Book:

Richard Feynman was a famous Nobel Prize winning physicist of the 20th century. He was well known for his deep understanding of how science and society are related, his playful and creative way of thinking, and his penchant for getting into unusual situations. The book is an autobiography that covers his childhood, college years, efforts working on the atomic bomb, travels around the world, and more. Feynman is no saint; however, there are many important science and life lessons to be learned throughout the book.

The Assignment and Options:

Write a meaningful reflection, essay, short-story, "illustrations with text", multiple choice questions, or another format (email and get approval first). Your work must meet or exceed the following criteria;

- It demonstrates you read the whole book (NOT just random excerpts)
- It contains direct references from the book with page and paragraph number (they can be inline numbers [23], then cited at the end)
- It requires at least the same amount of work as writing a 2 page reflection

An Example Multiple-Choice Question and Answer with Reference:

- Q: As a kid how did Feynman fix the poor man's radio that was making a terrible buzzing noise?
- a) With just an over-sized screwdriver that barely fit into his pocket.
 - b) By outwitting someone to look into the problem and fixing it for him.
 - c) By pacing back and forth, and thinking about it.
 - d) By banging it on the side a couple of times when the man was not looking.

A: c (pg. 20, par. 5-7) So the guys says, "What are you doing? You come to fix the radio, but you're only walking back and forth." After a moment Feynman simply switches two components inside and the radio begins to work properly. The man then continues to tell everyone, "He fixes radios by thinking!"

Note: This book is available in PDF format. You can read it in this format as long as you still reference the page and paragraph numbers used the PDF. This book is also available as an audiobook, however, listening to it does NOT count as the reading assignment. If you want to hear Feynman's actual voice then I suggest listening to the "Six Easy Pieces" audiobook or by watching other video clips of him on the internet.

Email me if you have any questions. Congratulations on finishing your junior year and enjoy your summer!
