

Environmental Issues are never strictly environmental. They have an underlying social demension that shapes the outcome of disaster.

Due to the inhabitants and those effected being of lower class and not having the resources available to them

Slow process of cleaning up and fixing the problem

Not giving enough compensation

Health problems from not properly cleaning up after leak

Not large enough punishment for wrongdoings of company

Social Impacts

15,000-20,000 deaths

**Bhopal Disaster:
Gas leak at
UCC Power
plant**

**Environmental
Impacts**

Devastating effects to the lives of inhabitants and those nearby

Soil and water contamination

Harmful toxic gas released into atmosphere

Huge economic loss and costs of disaster aftermath work
