Designing a playground: a group project

What you know:
A community group has commissioned your team to design a playground in their neighborhood. So far you know the following about the playground:

1. The playground will be built in an urban environment.
2. The playground will be on 5000 square feet of land that was donated by a local company.
3. You have a budget of $100,000 that was received through a state grant.

List three questions you need to explore in order to better understand the needs of the community group:
1. 
2. 
3. 

Venn diagram activity
Imagine that your project result is at the junction of the three circles of this Venn diagram. What are three major areas of understanding (perhaps using the questions above as a guide) that would go in the three circles?

Use the back of this sheet to draft an image of your playground.
